

City of Port Townsend Water System Flushing Program

The City of Port Townsend Water Department will be conducting its annual water system flushing beginning on Monday October 3, 2011 and continuing through October 31, 2011.

This program, designed to flush away traces of minerals left behind by the water, may cause harmless and temporary changes in the appearance of the water. The lines need to be flushed periodically to prevent build-up and to prevent problems to the system.

Changes in the water are generally in color – and the brownish water can be quickly eliminated by running your tap for a few minutes. It is a temporary condition and the water will quickly return to normal.
